

MOLE + LAWN RODENT CONTROL

Rottler Pest Solutions offers the most advanced and effective mole control and lawn rodent programs available. Our services include year-round warranted protection and non-invasive exterior treatments.

How We Achieve Amazing Results With Our Mole Exterminators

STEP 1

Initial Treatment

We start with an initial treatment that consists of three or more visits in 1-2 weeks.

STEP 2

Ongoing Maintenance

After the initial treatment, a technician will return bi-monthly* to ensure there is no new activity.

STEP 3

Follow-up Visits

If ever in between services you observe new mole activity, we'll re-treat at no additional cost.

MOLE CONTROL + LAWN RODENT PROGRAM DETAILS

We use a combination of three different techniques to reduce the population of moles including baits, traps, and repellents.

Baits are designed to mimic the moles natural diet and are placed underground.

Traps are designed to get moles as they present themselves in their runs, mounds, or tunnels.

Repellents are used to repel moles from an area after we gain control.
